DETAILS ON THE TOP 10 CANNABINOIDS

1. THC – Tetrahydrocannabinol

Relieves chronic pain and inflammation
Reduces nausea
Increases appetite
Useful in helping to treat withdrawal symptoms
Helps with digestive problems as it works as an anti-spasmodic
Anti-tumor properties

2. CBD – Cannabidiol

Proven to treat chronic pain.
Relieve symptoms of epilepsy and reduce seizures.
It is commonly used for the treatment of anxiety and depression
Antipsychotic effects
Relieves feelings of nausea
Improves efficiency of the cardiovascular system

3. THCV – Tetrahydrocannabivarin

Proven to assist in weight-loss
Used to prevent diabetes
Helpful for those with anxiety disorders or PTSD

4. CBDV – Cannabidivarin

CBDV contains many similar medicinal benefits to CBD
Proven in studies using mice to stop convulsions
Works well with epilepsy sufferers, reduces seizures
Possesses anti-inflammatory properties
Non-psychoactive

5. CBG – Cannabigerol

Helps with neurological disorders
Has the potential to help with skin disorders like psoriasis
Antifungal effects

6. CBC – Cannabichromene

Blocks pain and inflammation
Promotes anandamide in the body

7. CBN – Cannabinol

Can help with many issues including appetite, sleep, psoriasis and pain.

8. THCA – Tetrahydrocannabinolic Acid

Anti-emetic and anti-inflammatory
Non-psychoactive

9. CBDA – Cannabidiolic Acid

Needs more study but preliminary test results indicate effectiveness
in treatment of inflammation, nausea, and psychosis,
and some anti-cancer properties have been found.
Non-psychoactive

10. CBGa – Cannabigerolic Acid

Acts as a building block for other useful cannabinoids
Potential as an anti-proliferative cancer treatment but needs more study
Encourages apoptosis (death of cells)

Marijuana is derived from the Cannabis sativa plant. It contains more than 100 chemical compounds, called cannabinoids. When ingested or inhaled, these compounds bind to specific receptors in brain and nerve cells, which slows pain impulses and eases discomfort. The two most prevalent compounds are tetrahydrocannabinol (THC) and cannabidiol.
